

SHAMVEEL P

Full Stack Web Developer

📞 +91 8078200119 / ✉ shamveelp007@gmail.com /  GitHub /  LinkedIn

Profile Summary

Full-stack web developer experienced in building scalable applications with Next.js, React, Node.js, Express, and MongoDB. Skilled in clean architecture, repository patterns, and dependency injection. Specialized in secure authentication, REST API development, and high-performance UI/UX. Passionate about solving problems, optimizing performance, and delivering user-focused digital products while continuously learning emerging technologies.

Skills

Programming Languages: Javascript, Typescript, C, Python, Solidity

Frontend: Next.js, React, Tailwind CSS

Backend: Node.js, Express.js, REST APIs

Architecture & Patterns: Dependency Injection, Repository Pattern, MVC

Database: MongoDB, PostgreSQL, Firebase, Convex

Tools: Git, Github, n8n, Postman, Cloudinary, AWS, Remix, Figma, Canva

Familiar with: Web3 Integrations, AI Integrations, Smart Contract interactions, LangChain, n8n

Projects

ChainVerse – A WEB3 Ecosystem

[LiveLink](#) / [GitHub](#)

ChainVerse is a full-stack hybrid Web3 platform featuring a decentralized exchange, NFT marketplace, community section, and gamified quests system.

- Built the full application using **Next.js, Node.js, Express, Solidity (For Smart Contracts) and MongoDB** following Repository Pattern with Dependency Injection.
- Developed a complete **authentication system** with signup, login, Google OAuth, password reset, and admin login using **JWT (access + refresh tokens)** and secure HTTP-only cookies.
- Implemented the entire **DEX (Decentralized Exchange)** using custom **Solidity smart contracts**, deployed on the **Sepolia testnet**, supporting:
 - Custom ERC-20 tokens, token swapping, adding/removing liquidity, buy-crypto options, and automated market-making logic, with integrating the **ThirdWeb** Wallet Connection
 - AI-powered trading workflows, allowing users to chat with the bot and execute trades automatically through natural-language commands
- Added **Razorpay payment integration** to allow users to **buy crypto using INR**, bridging Web2 payments with Web3 assets.
- Created a fully responsive and scalable frontend using **Next.js + Tailwind CSS**, with protected routes and role-based pages.
- Built the entire **NFT Marketplace** using a custom Solidity marketplace contract with mint, buy, sell, and royalty logic.
 - Used **IPFS (Pinata)** for decentralized storage of NFT metadata and media.
 - Implemented **creator and platform royalties**, ensuring automated loyalty distribution on every resale.
- Developed a **mini social media community platform**, allowing users to post, like, share, comment, and follow each other.
 - Built a mini social platform where users can **post, like, share, comment, follow**, and chat in real-time using **Socket.io**.
 - Added **Communities** where users join fields, access perks, and participate in **group chats** powered by Socket.io.
 - Implemented **ChainCast**, a live video room for community admins using **WebRTC + Socket.io**, allowing speaking, camera streaming, and listener participation.

- Developed a complete **Community Admin Panel** for broadcasting messages, managing users/settings, hosting ChainCasts, and handling premium upgrades via **Razorpay**.
- Added **Quest creation tools** where admins can create quests manually or generate them via **AI (Google AI + LangChain)**.
- Designed the **Quest system** where admins set rules, tasks, and rewards, and users join quests to win points and prize pools based on predefined selection logic.
- Added a **Market section** showing live crypto data powered by real-time **Binance API** for price updates, **CoinGecko API** for historical charts, market cap, supply data, and token analytics.
- Added a **Super Admin** role with complete control over the entire platform, including user management, community management, quest oversight, and global system configuration.

Technologies Used: Next.js, React, Tailwind CSS, Node.js, Express.js, MongoDB, Solidity, Ethers.js, IPFS (Pinata), Razorpay API, Binance API, CoinGecko API, Socket.io, WebRTC, JWT, Google AI, LangChain, Cloudinary, Git, Postman

PC Monarch – An Ecommerce Website

[LiveLink](#) / [GitHub](#)

PC Monarch is a full-stack ecommerce platform specializing in laptop sales, built with a complete MVC architecture using Node.js, Express, MongoDB, and EJS.

- Built the backend using **MVC architecture** with Node.js, Express, and MongoDB for scalable and clean code structure.
- Developed dynamic **EJS-based frontend** for laptop listings, product pages, and user interactions.
- Implemented core ecommerce features: **cart, wishlist, checkout, coupons, COD, wallet payment, Razorpay**.
- Added complete **user profile & order management**, including cancellations, returns, and automated wallet refunds.
- Built a full **Admin Panel** with user management, product management, coupon control, and order handling.
- Built full **user profile management**, including profile edit, address edit, and account settings.
- Created an **analytics dashboard** showing sales, revenue, orders, and overall store performance.

Technologies Used: Node.js, Express.js, MongoDB, EJS, Razorpay API, JavaScript, MVC

Mini Projects

Bore2Game – Online Game Platform

[LiveLink](#)

A simple gaming platform that lists multiple fun mini-games with a clean and responsive UI.

- Built with **React.js + Tailwind CSS**, focusing on fast UI and seamless user experience. Used **LocalStorage** to save user scores, progress, and game history. Designed modular components for adding new games easily. Fully responsive layout optimized for web and mobile.

ExpenSplit AI – AI-Powered Expense Tracker & Splitter

[LiveLink](#) / [GitHub](#)

An intelligent expense tracking and splitting platform with automated workflows.

- Built with **Next.js** and **shadcn/ui** for a clean, modern UI. Integrated **Clerk** for secure authentication (login & signup). Added **Inngest** for backend event handling and background processing. AI assistance for categorizing and splitting expenses among groups.

Technologies Used: Next.js, shadcn/ui, Clerk Auth, Convex DB, Inngest, JavaScript/TypeScript

Education

Full Stack Web Development (MERN)

2024 - Present

Brototype, Calicut, India

Lab Chemist (Rubber Chemistry) - Intern

2024

CFSC Manjeri, Kerala, India

BSc. Physics

2021 - 2024

Calicut University, Kerala, India
